

KNOWLEDGE ORGANISER

Overview

-Plants are a large group of living things that use sunlight to make their own food.

- -There are many, many different kinds of plants, including trees, vines and grasses.
- -Plants have lots of different parts, for example stems, leaves and roots.
- -Some trees lose their leaves in the winter (deciduous). Some keep their leaves through the year (evergreen).
- -Some plants are 'flowering plants' they grow flowers sometimes.

Types of Plants									
2 AR	Trees	Moss							
142	Trees are tall, woody plants. They usually have a stem called a trunk.	Mosses are small, seedless plants that grow in moist places.							
-Some t	rees can live for hundreds or even thousands of years.	-Mosses grow together in large, thick mats.							
	-	-There are more than 10,000 different types of							
-Trees i	include birches, palms and pines.	moss around the world.							
	Bushes/Shrubs	Vegetables							
Acres	Bushes and shrubs are quite low plants that have lots of branches.	-Vegetables normally come from a type of plant called a herbaceous plant. Vegetables can be eaten.							
-Bushes de	o not normally grow as tall as trees.								
-They inclu	ide lavender, periwinkle and thyme. bery is a place with lots of shrubs.	-Lettuce, spinach and broccoli are the leaves of plants. Asparagus is the stem of a plant. Some vegetables grow in the ground, e.g. carrots.							

Flowering Plants

Flowering plants produce flowers to help them reproduce. They follow this life cycle:

Seed - Flowering plants begin life as seeds. They need soil, air and water to grow.

Seedling – When the plant first starts to grow, it is called a seedling.

Flowering – When the plant is fully grown, it will produce its own flowers. These flowers will eventually produce seeds. When the seed gets to the ground, the cycle starts again.

Deciduous Trees									
Oak	Maple	Sycamore	Horse Chestnut	Elm	Beech	Yew	Pine	Fir	Hemlo

-Plants are made up of many different parts.

-Roots – Roots absorb water and minerals from the ground. They also help the plant to stay standing in the ground.

-Stem – The stem supports the plant above the ground. It also helps to carry water and minerals from the roots to the leaves.

-Leaves – Leaves collect energy from the Sun and turn this into food for the plant (photosynthesis).

-Flowers and Fruits – Flowers and fruits help the plant to reproduce (to make more plants).
